Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Шa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 8
JE0099

neural cell adhesion molecule 1 - African clawed frog

neural cell adhesion molecule 1 - African clawed frog

N/Alterante names: N-CAM 1
C;Species: Xenopus laevis (African clawed frog)
C;Date: 19-May-1998 #sequence_revision 29-May-1998 #text_change 09-Jul-2004
C;Accession: JE0099
C;Accession: JE0099
C;Accession: Jesyayama, E.; Tadakuma, T.; Shiokawa, K.
Biochem. Biophys. Res. Commun. 245, 127-132, 1998
A;Title: Molecular cloning of ssd-form neural cell adhesion molecules (N-CAMS) as the in A;Title: Molecules: JE0099; MUID: 98204770; PMID: 9535795
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -----NKSDDSVIQLLNPNRQTIYFRDFRPLKDSRFQL-----LNFSSS 105

neural cell adhesion molecule long domain form precursor - African clawed frog N;Alternate names: NCAM-180
N;Contains: neural cell adhesion molecule, short domain form (NCAM-140)
C;Species: Xenopus laevis (African clawed frog)
R;Krieg, P.A.; Sakaguchi, D.S.; Kintner, C.R.
Nucleic Acids Res. 17, 10321-10335, 1989
A;Title: Primary structure and developmental expression of a large cytoplasmic domain for A;Reference number: S09600; MUID:90098871; PMID:2481269
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A;Accession: S09600
A;Molecule type: mRNA
A;Residues: 1-1088 «KRI»
A;Crossitues: 1-1088 «KRI»
A;Crossitues: UNIPROT:P16170; EMBL:M25696; NID:g214609; PIDN:AAA49909.1; PID:g21461)
A;Crossitues: the authors translated the codon AAA for residue 970 as Leu
C;Comment: NCAM mediates cell-cell adhesion via homophilic binding with another NCAM mole
C;Comment: Several forms of NCAM are produced by alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                #status predicted

Isolated nucleic acid molecules encoding human secreted proteins are used for the prevention, amelioration and treatment of autoimmune, inflammatory, hyperproliferative and cardiovascular disorders, cancer, wounds, and infectious diseases.

Disclosure; Page 182-183; 803pp; English.

The present invention relates to 12 secreted human proteins and the nucleotide sequences encoding them. The polynucleotide sequences given in AAAB06066-AB0623 encode the 12 secreted protein sequences given in AAB35576-B25533. The human secreted proteins have various activities dependent on the tissues in which they are expressed. Examples of the

                     The present sequence is a novel human cell surface receptor protein (HCSRP) designated HCSRP-8. The nucleotide sequence was identified in Incyte Clone 31226 from the CDNA library LUNGNOTO2, which was made from RNA isolated from Lung tissue. A number of Incyte Clones were used to assemble the consensus sequence. BLAST analysis showed that the sequence is homologous to immuno-superfamily protein B12 g3779242. HCSRP and its antagonist are useful for preventing or treating disorders associated with decreased or increased expression or activity of HCSRP. Such disorders include cancers such as leukaemia and melanoma, immune disorders such as rheumatoid arthritis, asthma and atherosclerosis, bacterial and parasitic infections and neuronal disorders such as betthesia. Alzheimer's disease, multiple sclerosis and espilepsy. Polymucleotides encoding HSCRP may be used as hybridisation probes to diagnose these conditions. Anti-HCSRP antibodies may be used as
                                                                                                                                                                                                     antagonists, as a targeting or delivery mechanism for bringing pharmaceutical agents into contact with cells or tissues expressing HCSRs and for diagnosis of HCSRP-related disorders. HCSRP and its catalytic or immunogenic fragments are useful for drug screening using libraries of
                                                                                                                                                                                                                                                                                                                                                               9

The present amino acid sequence is the human lymphoid derived dendritic cell adhesion molecule, LDCAM. It is found on lymphoid derived dendritic cells and displays homology to adhesion molecules, B-1 and cytoplasmic region of BP-Li. Human LDCAM is expressed in breast, retina, feetal liver, spleen and heart, lung, muscle, placenta, thyroid and lung carcinoma. LDCAM polypeptides interacts with T cell surface molecules to alter signalling and inhibits T cell proliferation, bind to themselves and B7L-1, an LDCAM binding protein and increases natural killer (NK) cell populations. It may be used to measure the biological activity and as quality control reagents of LDCAM binding proteins abording spatemic LDCAM may be used for treating disorders associated with malfunctioning of immune system, inflammation, autoimmune disorders, viral infected cells, infectious diseases and for killing tumour cells. They are also useful for prevention or reducing the effect of congan and bone marrow transplant rejection and for modulating T cell immune responses. LDCAM polypeptides may also be used as carriers for delivering agents attached to T cells or

subject. The method comprising contacting a cell component of a proliferating cell with a reagent that detects level of the cell component in the proliferating cell and determining modification in the level of the cell component in proliferating cell as compared with a healthy cell, where modification indicates disorder associated with TSLC1. The method is useful for detecting a cell proliferative disorder (e.g. liver, lung or pancreatic cancer) associated with tumour suppressor lung cancer i (TSLC1) in a subject. The invention is useful in gene therapy and for treating a cell proliferative disorder such as lung cancer funan non-small cell lung cancer), liver cancer (hepatocaellular carcinoma) or pancreatic cancer associated with modification of TSLC1 production, where a reagent which modulates (preferably, increases) TSLC1 level in the cells, is employed. The present sequence is human TSLC1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antiparkinsonian; immunostimulant; cytostatic; immunosuppressive; antidiabetic; antiallergic; gene therapy; wound healing; tissue repair; burn; central nervous system disorder; Alzheimer's disease; Parkinson's disease; Huntington's disease; immune disorder; autoimmune disorder; multiple sclerosis; diabetes; allergy.

                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated polynuclectide (I) comprising one of 245 sequences (ABQ93588-ABQ93532). Treating a condition comprising administering to a mammalian subject a composition comprising the protein (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II).

(I), (II) and (III) are useful for diagnostic evaluation of disorders.

(I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral sclerosis, immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention relates to an isolated nucleic molecule that is at least 55% identical to 18 human cDNA sequences representing 12 novel genes encoding secreted proteins or a polymucleotide fragment of the CDNA sequence contained in American Type Culture Collection (ATCC) deposit No. defined in the specification, its species homologue, a variant or allelic variant of the polymucleotide having a polymuclacotide capable of hybridising under conditions the polymuclacotide. Where the polymucleotide having a nucleotide sequence of only A or T readiluse. Also included are recombinant vectors, host cells (for producing the polypeptide), the secreted polypeptide (comprising a sequence that is at least 95% cannot allelic variant or specifically an allelic variant or specifically bind to the polypeptides diagnosing, treating, preventing or ameliorating a medical condition by administering the polypeptide or the polypeptide or ameliorating an activity in a biological assay (by expressing the CDNA sequence and dentifying an activity in a biological assay (by expressing the CDNA sequence in a cell, isolating the supernatant, and detecting an activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human secreted nucleic acid molecules and polypeptides, useful for preventing, treating, or ameliorating a medical condition, such as cancer, inflammation, immune disorders, neurological and blood clotting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Greene JM;

in a biological assay and identifying the protein in the supernatant having the activity). The polypeptides, nucleic acids and antibodies are useful for diagnosing a pathological condition or a susceptibility to a pathological condition, for preventing, treating, or ameliorating a medical condition, such as cancer, inflammation and other immune a disorders, neurological and blood clotting disorders (many examples are given in the specification). The nucleic acids are also useful for chromosome identification, radiation hybrid mapping or long-range restriction mapping. The polypeptides and antibodies are useful for providing immunological probes for differential identification of the tissues immunohistochemistry assays. The polypeptide, polynucleotide, agonist or antagonist may also be used as a food additive or preservative to increase or decrease storage capabilities, fat content or other intertitional components. The present is a secreted protein of the

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that is differentially expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polyneptides or their antibodies. The polynucleotide or the compound that composition comprising the one or more polyneptides or their antibodies. The polynucleotide or the compound to make activity is useful for preparing a medicament for treating pain and a pharmaceutical composition comprising the one or more plany (CCI) and spared nerve injury (SNI) in an animal (e.g. gene presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed contains the sequence data for this patent did not form part of the printed for its in the contains the sequence data for this patent did not form part of the printed contains the contains the c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid sequence, or its allelic variant, a fragment of the CDNA sequence, or its fragment, properting or species homologue. The nucleic acid is useful for preparing a medicament for preventing, treating or ameliorating a medical condition e.g., cancer, live disorders such as hepatitis or neural disorders such as Alzheimer's disease. The present sequence represents the amino acid sequence of a novel human secreted protein associated

modulating agent, by contacting an assay system comprising a purified HM polypeptide (human orthologue of genes that modify the p53 pathway in Drosophila) or nucleic acid with a test agent under conditions, where but for the presence of the test agent-biased activity of the assay system. Also included are modulating (M3) a p53 pathway of a cell (comprising cell affective in p53 pathway of a cell (comprising contacting a cell affective in p53 pathway of a cell (comprising contacting a cell affective in p53 function with a candidate modulator that specifically binds to a HM polypeptide comprising an HM amino acid sequence, where p53 function is restored), modulating (M3) a p53 pathway of in a mammalian cell (comprising contacting the cell with an agent that specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) a disease in a patient (comprising contacting the cell with an agent that specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) a disease in a patient (comprising the sample with a probe for HM comparison; (c) comparing the sample with a probe for HM comparison; (d) contacting the sample with a probe for HM comparison; (e) comparing the results with a control; and (d) determining to identifying modulators of the p53 pathway, and series or disorder prognosis is related the comparison indicates a likelihood disease). (M1) is useful for diagnosing breast, colon, kidney, lung and ovarian cancer, in a patient, where disease or disorder prognosis is related the proliferation of the cell, so that the cell undergoes normal contacting defects in the p53 pathway, such as, angiogenesis, apoptotic or cell proliferation disorders. The present sequence also useful for treating defects in the p53 pathway such as angiogenic, also useful for treating defects in the p53 pathway such as angiogenic, also useful for treating defects. The present sequence
                                                                                                                           invention relates to identifying (M1) a candidate p53 pathway

Identifying modulators of the p53 pathway for use in treating apoptotic or cell proliferation disorders, comprises screening for agents that modulate activity of a human ortholog of genes that modify the p53 pathway in Drosophila.

Example 2; Page 557-559; 678pp; English.

The invention relates to identifying (M1) a candidate p53 pathway

modulating agent, by contacting an assay system comprising a purified HM

CC modulating agent, by contacting an assay system condity the p53 pathway in

Drosophila) or nucleic acid with a test agent under conditions, where but

for the presence of the test agent under conditions, where but

correcting a cell defective in p53 pathway of a cell (comprising

contacting a cell defective in p53 function with a candidate modulator

Also included are modulating (M2) a p53 pathway of a cell (comprising

contacting a cell defective in p53 function with a candidate modulator

that specifically binds to a HM polypeptide comprising an HM amino acid

sequence, where p53 function is restored), modulating (M3) a p53 pathway

in a mammalian cell (comprising contacting the cell with an agent that

specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4)

cc adisease in a patient (comprising); (a) obtaining a biological sample

from the patient; (b) contacting the sample with a probe for HM

cxpression; (c) comparing the results with a control; and (d) determining

whether the comparison indicates a likelihood disease). (M1) is useful

for identifying modulators of the p53 pathway. A probe for HM expression

cs useful for diagnosing breast, colon, kidney, lung and ovarian cancer,

contacting applications, where disease or disorder prognosis is related

therapeutic applications, where disease or disorder prognosis is

the p53 function of the cell, so that the cell undergoes normal

cc the p53 function of the cell, so that the cell undergoes normal

cc also useful for reating defects in the p53 pathway of a cell,

the p54 function of the cell, so that the cell undergoes normal

cc also useful for treating defects in the p53 pathway or a cell

cc also useful sorliferation disorders. The present sequence

calso useful sorliferation disorders in the p53 pathway or a cell

cc also useful sorliferation disorders in the p53 pathway or a cell

```
The invention discloses a composition comprising two or more isolated rat or human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more or polympeptides or their antibodies. The polymocleotide or the compound that composition a method for identifying a compound useful in treating complypeptides its activity is useful for preparing a medicament for treating pain and a pharmaceutical nerve injury (SNI) in an animal (e.g. gene their activity is useful for preparing a medicament for treating conjury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therespy). The sequence presented is a human protein (shown in Table 2 of therapy) in the sequence data for this patent did not form directly from WIPO at the sequence data for this patent did not form directly from WIPO at the sequence data for this patent did not form directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that is differentially expression of the polynucleotide sequence the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polyneptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound to method for identifying a compound useful in treating pain and spared nerve injury (SNI) in an animal (e.g. gene therappy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed the specification but was obtained in electronic form directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           agents.
                                                                                                                                                                                                                                            Domain
  The present invention describes nucleic acids encoding PRO secreted and transmembrane proteins used therapeutically. The PRO proteins have cytostatic, anti-inflammatory, anti-prolliferative and immunosuppressive activity. The proteins and polynucleotides can be used in therapy, identification of homologues, raising antibodies and design of probes and primers. They can be used in a range of diseases related to proteins that they have homology with, e.g. a PRO protein having homology to complement proteins may be used in inflammatory responses
                                                                                                                                                                                                                                                                                               119 RYFCQLYTDPPQESYTTITVLVPPRNLMIDIQKDTAVEGEEIEVNCTAMASKPATTIRWF 178

New human nucleic acids encoding secreted and transmembrane polypeptides which are designated as PRO polypeptides are described The membrane-bound proteins have various industrial applications, including as pharmaceutical and diagnostic agents. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human nucleic acids encoding secreted and transmembrane polypeptides, designated as PRO polypeptides, useful as pharmaceutical and diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eaton DL, Ferrara N, Filvaroff E;

Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention.

The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adernal, lung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumors, such as prostate and breast tumors, in mammals and to screen for modulators of the compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TISCOVNKSDDSVIQLINPNROTIYFRDFRPLKDSRFQLLNFSSSELKVSLINVSISDEG 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
